All 'Green' Banner stands have environmentally friendly graphic prints using bio inks.

It has always been difficult or impossible to recycle conventional banner stand graphics, PVC banners and foamex and these have always ended up in landfill sites.

We are pleased to confirm that investment in new technology enables these materials to be fed back into the PVC chain and made into a variety of items including traffic management products.

When 'Green' banners are returned to us by the client we bale and consolidate these with other products and ship them to our recycling partner.
